## Water Quality Education Materials

---

### Public Education/Advertisement Distribution Guidelines

---

In 1995, the Washington State Department of Ecology, King County, and the cities of Bellevue, Seattle, and Tacoma launched a public education project about nonpoint water pollution for Puget Sound citizens. As a result of their efforts, the Water Quality Materials were created. The purpose of the materials is twofold: 1) to make people aware of nonpoint pollution; and 2) to educate people about what they can do to prevent, reduce, and stop water pollution.

The following guidelines must be followed in order to use the public education/advertisement material:

1. The materials cannot be used for profit or political gains.
2. Local governments or organizations using the material may add their name in the same size and context as the currently listed organizational names. Organizations may also add their logo and contact information on the educational flier.
3. A credit line must appear on all materials crediting the Washington State Puget Sound Action Team for original development of the materials.
